# **Concussion Response Tool**

Child's name:	•	Age:
Name of parent/guardian:		
Name of person monitoring child at scene:		
Date of incident:	Time:	
Description of incident:   Blow to the head	☐ Hit to the body	
What happened?		
		_

At the scene of the incident

### a) Follow basic first aid:

- Danger
- Response
- Airway
- Breathing
- Circulation

### b) CALL 911 if the child shows any of these Red Flag Symptoms at any time.

RED FLAG SYMPTOMS				
You see:	The child complains of:	The child is showing:		
☐ Repeated vomiting	□ Neck pain	<ul><li>Unusual behavior</li></ul>		
<ul><li>Seizure or convulsion</li><li>Deteriorating or loss of consciousness</li></ul>	<ul> <li>Double vision</li> <li>Weakness or tingling/burning in the arms or legs</li> <li>Severe or increasing headache</li> </ul>	☐ Increasing confusion or irritability		

#### c) If there is serious injury OR any of the Red Flags:

Step 1: Determine if this is a medical emergency

- Call 911
- · Do not move the child
- · Stay with the injured child and monitor them until Emergency Services arrives
- · Do not remove the child's helmet unless you are trained to do so

## Step 2: Remove the child from play or activity

If the injury is NOT an emergency, remove the child from play and do not let them return to play that day. The child needs to be seen by a doctor as soon as possible. While the child is waiting to be taken to a doctor follow instructions in Step 3.

## Step 3: Monitor the child

Do not leave the child alone and ensure they are with a responsible adult at all times. In addition to the Red Flags, watch for the following signs and symptoms and check off any that appear.

a) Ke	ecord what you see	
	Loss of consciousness	Comments:
	Lying motionless on ground	Commonic.
	Slow to get up	
	Balance problems	
	Uncoordinated movement	
	Grabbing or clutching head	
	Dazed, blank or vacant look	
	Confusion	
b) Re	ecord what the child is saying	
	Headache	
	Dizzy	Comments:
	Confused	
	Double or fuzzy vision	
	Sick	
	Don't feel right	
	Difficulty concentrating	
	Numbness in arms or legs	
٥	Tired or drowsy	

#### c) Ask these questions to test memory

Failure to answer any of these questions correctly may suggest a concussion. Repeat periodically and tick response.

5 to 12 years old	Time	Correct	Incorrect	Time	Correct	Incorrect	Time	Correct	Incorrect
Where are we now?									
Is it before or after lunch?									
What did you have last lesson/class?									
What is your teacher's name?									
13 years old and over	Time	Correct	Incorrect	Time	Correct	Incorrect	Time	Correct	Incorrect
What venue are you at today?									
Which half is it now?									
Who scored last in this game?									
What team did you play last week/									

## Step 4: Refer to parent/guardian

Did your team win the last game?

game?

The parent or guardian should take the child to a doctor for assessment as soon as possible. Ideally this should be done on the same day as the injury and may require taking the child to an Emergency Department if they are unable to access their own doctor.

## At home

Do not leave your child alone. Keep them in a calm environment. Do not let your child drive or return to activities.

**Do not give your child any medication unless directed by a doctor.** There is evidence that some medications can worsen concussion symptoms and could increase potential risks associated with brain injuries.

#### CALL 911 if the child shows any of these Red Flag Symptoms at any time.

RED FLAG SYMPTOMS					
You see:	The child complains of:	The child is showing:			
□ Repeated vomiting	□ Neck pain	<ul><li>Unusual behavior</li></ul>			
<ul><li>Seizure or convulsion</li><li>Deteriorating or loss of consciousness</li></ul>	<ul> <li>Double vision</li> <li>Weakness or tingling/burning in the arms or legs</li> <li>Severe or increasing headache</li> </ul>	☐ Increasing confusion or irritability			

## Monitor for signs and symptoms

If your child shows one of the following symptoms, seek medical attention as soon as possible.

Thinking and Remembering	Physical	Emotional and Mood	Sleep
<ul> <li>Not thinking clearly</li> <li>Feeling slowed down</li> <li>Unable to concentrate</li> <li>Unable to remember new information</li> </ul>	<ul> <li>Headache</li> <li>Fuzzy or blurry vision</li> <li>Nausea and vomiting</li> <li>Dizziness</li> <li>Sensitivity to light or noise</li> <li>Balance problems</li> <li>Feeling tired or having no energy</li> </ul>	<ul><li>Easily upset or angered</li><li>Sad</li><li>Nervous or anxious</li><li>More emotional</li></ul>	<ul><li>Sleeping more than usual</li><li>Sleeping less than usual</li><li>Having a hard time falling asleep</li></ul>

#### Continue to monitor and record information

Signs and symptoms can be delayed for several hours or even days following a concussion incident. Problems caused by a head injury can get worse later that day or night. Your child should not be left alone in the first 24 hours.

If your child's symptoms are getting worse or they develop new symptoms seek medical attention as soon as possible.

#### The first night

A child with a concussion should not be left on their own during the first night.

Throughout the night they should be checked regularly – but not woken. A parent should sleep in the same room as the child and check on them every two hours. Only wake the child if you have concerns about their breathing, colour, or how they are sleeping. If they are slow to wake or show any of the **Red Flag Symptoms** call 911.

If they are sleeping normally then let them sleep. Sleep is an important part of the recovery process.

You know your child best. If they are showing any unusual behaviour seek medical attention.
