COED Program – Fairness Model

The COED Fairness Model is to assist teams in a position where the goal differential has increased to 7 goals in a game. The Fairness Model is to be enacted to give a player advantage to the losing team until the goal differential has reduced to 5 goals.

How it Works

The Fairness Model is enacted when a score differential reaches 7 goals in a game. The winning team must play one player short, while maintaining the 2 males and 2 females ratio on the field.

When/If the score differential is reduced to 5 goals, the team will return to even strength.

Should the differential reach 7 goals again, the winning team will go back to playing one player down.
