

# Diamond 1

## Diamond Summary Midget Diamond

Diamond 1 has the proper footprint of a good midget diamond, but the infield is getting worse as the underlay is starting to come up in spots and this may be more than just a shale problem.

As we only have one team taking advantage of this field it may not be the number one priority for doing a regrade of the infield, but this field needs work and should be discussed in the short to long term plan.

### Dugouts

We should be looking at dugouts for safety, cleanliness, paint and shale/drainage when it rains.

### Fence Lines

### Shale

This field needs some work on the infield, shale by itself will not be enough as underlay cloth is showing in places.

### Home Plate Area

Home plate area is always messy when it rains, and we could look at clean up and edge grass if possible.

### Mound Area

### Grass Cutlines

Dugouts, batters boxes

### Stands

### Washroom Availability

### Other

Look at cage maintenance and seeing if we can get access to power when we bring down pitching machine
